

PROBIOTIC PRODUCT HEALTH BENEFIT COMPARISON

Proenzol® probiotic products are expertly formulated with clinically proven strains of beneficial bacteria to meet the needs of each and every patient. Backed by emerging research, each encapsulated probiotic formulation incorporates a minimum of 8 distinct strains thoughtfully chosen for their unique and complementary functionalities and expertly balanced to take full advantage of the individual probiotic’s strengths. Due to the delicate nature of probiotic organisms, it is recommended to take probiotics away from food to ensure their survival, as they may not withstand the peristalsis and mechanical digestion associated with eating. With this in mind, our probiotics are formulated with Apple PrePectin™ to not only naturally protect the probiotics from gastric acid, bile, and enzymes while in transit through the digestive tract, but also to serve as a prebiotic for the probiotics once they reach the intestines.

Apple PrePectin™ is a proprietary blend of non-GMO apple pectin and apple fiber. To learn more about Apple PrePectin™ visit enzymesinc.com/appleprepectin
